Treatments for Arrhythmias (Heart Rhythm Disturbances)

by Ricker Polsdorfer, MD

En Español (Spanish Version)

Treatment of arrhythmias depends on the type and seriousness of the particular rhythm disturbance. For example:

- Medications are most often used in tachyarrhythmias (fast heart rates).
- Electrical conversion is used for life-threatening irregular rhythms.
- Pacemakers are used most frequently for bradyarrhythmias (slow heart rates).

Treatment aims to maintain the heart's ability to pump blood efficiently.

Treatment involves the following:

Lifestyle changes
Medications
Surgery
Other treatments
